>> **The Lili Lite** [<http://www.lililite.com/epages/61793772.sf>] - Thijs Smeets sent us his new design and I like it. Called Lili Lite, it's a reading light, a bookmark and a bookshelf all in one. This is a great solution for small bedrooms! [Www.studiosmeets.com](http://www.studiosmeets.com) [<http://studiosmeets.com/>] is his main design site.

>> **Art Bag Lamps** [<http://www.artbag.me/artbag.me/image.html>] - These are handbags turned into lamps by Debra Franses Bean, who has been inspired by handbags since she was a child (it was her father's business). "The bags are cast from clear shiny tactile resin and sit on a colored illuminated light base made from silicon." There are a lot of different versions.

>> **Sum Design** [<http://www.sum-design.com/#/>] - Launched by Susie Mendive in 2005, Sum Design is a very cool small wallpaper and fabric company that doesn't think in terms of classic repeat patterns!

>> Glimmerglass Furniture

[<http://www.glimmerglassfurniture.com/Home.html>] - Imagine being able to print your favorite fabric pattern directly onto a glass or aluminum table? That's what Glimmerglass does. In fact, while Liberty and David Howell have started with occasional tables, their technology allows you to print pattern, color or any image onto a furniture surface.

>> **Infectious** [<http://www.infectious.com/>] - Started in San Francisco in 2000 out of a desire to get a cool image on a hatchback, Infectious now makes and designs images that can be applied to phones, computers, walls AND cars. You can design your own or

choose a favorite image. It's all about adding your own style to an otherwise blank space.
